PRODUCT BRIEF

Cybrhawk automates the task by assessing firewall rules and configurations across all your firewalls including new and next-gen. firewalls, which will help you optimize the device performance. You will be also able to Identify threats in your network infrastructure and get access to timely remediation, including improvements on the command line and reducing audit planning activities and costs by as much as 85%

SECURITY ANALYSIS & ORCHESTRATION PLATFORM

CYBRHAWK AUTOMATES THE ANALYSIS & OPTIMIZATION OF YOUR SECURITY TECHNOLOGIES TO REDUCE COST, IMPROVE PERFORMANCE & ARCHEVE COMPLIANCE

Chief Information Security Officer

Lack of visibility on the entire network

Surprise findings during audits

Tedious process to get periodic configuration reviews done

Absence of a real-time view of the network security posture

CybrHawk as a Solution

A CISO dashboard that informs you of what the network security level is and access to custom reports.

Ability to approve configuration changes by viewing security and compliance impact before the change is made.

CybrHawk enables access control rules to be reviewed via an automated workflow that reduces the time taken from days to hours to complete complex configuration reviews.

Security Consultant

Multiple tools and scripts needed to audit different client environments

Configuration reviews take significant amounts of time

Writing up reports

CybrHawk as a Solution

A single tool that supports a wide variety of security technologies and comes with in-built policies that can be selected to audit against.

Customize report contents and layouts.

Network Administrator

Inability to determine the security and compliance level of a new change.

Tedious troubleshooting to determine access control problems

Clutter of rules and objects makes device operations very difficult and complex

CybrHawk as a Solution

Impact analysis of each change can be done using the "what if" scenario to ensure all new changes are in line with organizational policies and regulatory requirements.

Single panel to determine which systems can or cannot access which determination system or network segment and identify unused, redundant and shadowed configurations elements.

Security Auditor

Ensuring and evaluating the efficacy of the security policies.

Limited clarity and interpretation of your network and security policies

Ensuring compliance and generating reports

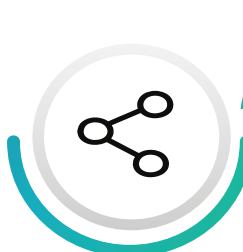

CybrHawk as a Solution

Support and covers a variety of pre-loaded audit policies that covers regulations like PCI DSS, CI Security Benchmarks, Vendor Guidelines, etc.

CybrHawk provides a comprehensive real-time compliance status.

HOW DOES IT WORK?

SELECT
Choose your compliance policies

CONNECT

Connect all your security technologies with CybrHawk, we support all type of data sources, such as Firewalls, Routers, Switches, Proxy, etc

REVIEW
Review the results and determine actions

ANALYZE

Run the configurations against these policies

MONITOR
Review configuration changes & critical events in real-time

OPTIMIZE

Implement changes via the orchestration

SUPPORTED NETWORK SECURITY DEVICES & SOLUTIONS

ABOUT CYBRHAWK

CybrHawk
Transforming Cybersecurity

CybrHawk is a leading provider of information security-driven risk intelligence solutions focused solely on protecting clients from cyber-attacks. We also pioneered an integrated approach that provides a wide range of cybersecurity solutions for organizations of varying size and complexity. Our solutions enable organizations to define their cyber defenses to prevent security breaches, detect real-time malicious activity, prioritize and respond quickly to security breaches, and predict emerging threats.
